EXAMINER'S AMENDMENT AND REASONS FOR ALLOWANCE

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the specification, page 1, between the title and "Technical Field", the following paragraph was inserted:

— This application is a 371 of PCT/JP04/16329, filed November 4, 2004. —.

The following is an examiner's statement of reasons for allowance: the prior art of record considered as a whole fails to teach or suggest a holographic multiplex recording method for forming recording spots, which are an overlapping projection region of an object beam and a reference beam, so as to be superimposed with a slight shift relative to one another in an X-axis direction and a Y-axis direction when interference fringes are formed in a recording layer in a holographic recording medium by projecting the object beam and the reference beam, the holographic multiplex recording method comprising: a Y-axis direction first multiplex recording step of forming a Y-axis direction first recording spot matrix by arranging first-stage recording spot rows comprising recording spots arranged with a constant pitch in the X-axis direction without overlapping, in the Y-axis direction with a slight phase shift relative to one another; a Y-axis direction second multiplex recording step of forming a Y-axis direction second multiplex recording spot matrix by arranging second-stage recording spot rows comprising recording spots arranged with a constant pitch in the X-axis direction without overlapping with reference to a position slightly phase-shifted in the X-axis direction with respect to the first-stage recording spot rows, in the Y-axis direction with a slight phase shift relative to one another; and **a step of forming a Y-axis direction third multiplex recording spot matrix to a Y-axis direction last multiplex recording spot matrix by repeating a step which is similar to the above until immediately before the total sum of the phase shift in the X-axis direction from the Y-axis direction first multiplex recording spot matrix to a Y-axis direction last multiplex recording spot matrix becomes the same as the pitch between the recording spot rows in the X-axis direction.** (bold language emphasized).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
